

WAREHOUSE FINDS A-1 SOLUTION IN DAYLIGHTING

The Company: A-1 Cold Storage Warehouse, Inglewood, California

The Challenge: Introduce daylighting into 12,000 sq. ft. of warehousing and office space encased by 8 inch thick concrete, windowless walls.

The Solution: Twenty-four SunTrackerOne Advanced Daylighting Systems flood interior spaces with illumination equivalent to 19,200 watts of fluorescent lighting. A-1 turns off all electric lighting during the day and avoids "punching" holes in the walls for windows.

The Bottom Line: Utility bills dropped by \$2000 a month when rates were high, but today still slice more than \$1000 from the company's monthly expenses. Also, employees are no longer "cranky" and improved color rendering helps them differentiate colors more easily. Reducing electricity consumption averts production of more than 1.2 million cu. ft. of carbon dioxide and other pollutants a year.

The A-1 office illuminated exclusively with daylight.

The A-1 warehouse illuminated exclusively with daylight.
